

emusletter#001

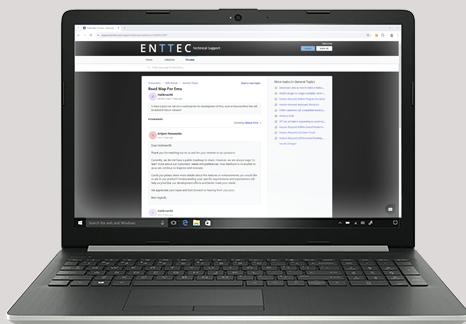

Greetings, EMUser!

With plenty of exciting developments going on behind the scenes at EMU HQ, we thought it was about time we kept you posted with our ongoing tweaks and other tasty EMU-related morsels via a regular EMUsletter.

So that's why you're reading this!

Let's kick things off with some key things that our software devs have been busy working on in recent weeks:

- **Workflow:** EMU just became about *30% faster*. We've made a notable performance improvement and you'll be able to handle more faders than ever before on older machines.
- **AU improvement:** Fixed **Logic Pro** Audio Unit plugin support. Simply open the plugin manager in Logic Pro, select ENTTEC under manufacturer, press reset and rescan the selection.
- **VST/AU improvement:** Added PreSonus **Studio One** support.
- Added multiple RDM devices detection.
- More soon - watch this space!

And remember: if you have any questions, would like to contribute ideas or feedback to help shape the future of EMU, or want to raise a fixture request for the **Crescit** library, don't be afraid to join in the action on our official EMU forum ...

What are our EMUicians up to?

Check out Melbourne-based drummer [Adam Sinclair](#)'s cover of "Flourish" by The Contortionist, with lighting designed and programmed by himself using EMU.

As a Logic Pro user, Adam will no doubt be delighted with EMU's improved Logic Pro support - so we look forward to seeing more cool stuff coming our way.

" Thought I'd share my experience using EMU in Logic Pro X. I bought the DMX USB Pro and EMU software to program lights to my drum covers and I'm really enjoying using this overall. All lights are programmed within Logic Pro X controlled via midi. Once I got everything set up, for the most part it's easy to use and I'm pretty happy with how EMU works so far. It suits my purpose and I'm happy with the end result. Also, enjoying it much more than DMXIS! "

Are there any performance or installation videos you've made using EMU? We'd love to share what you've been up to, so get in touch!
