

emusletter#002

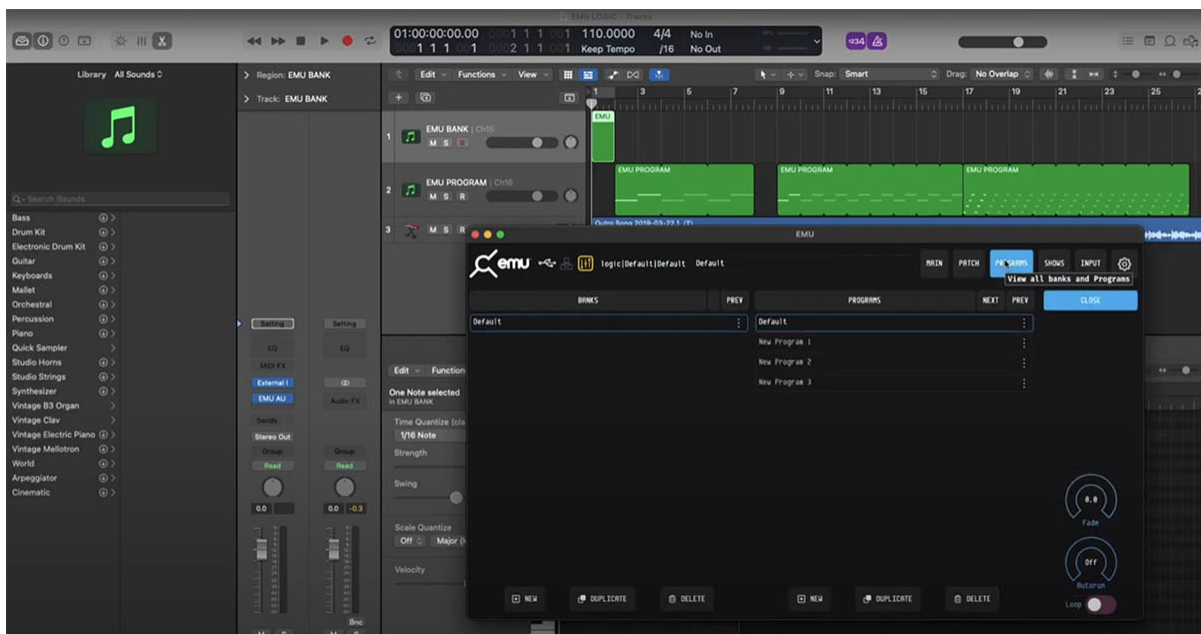

Greetings, EMUser!

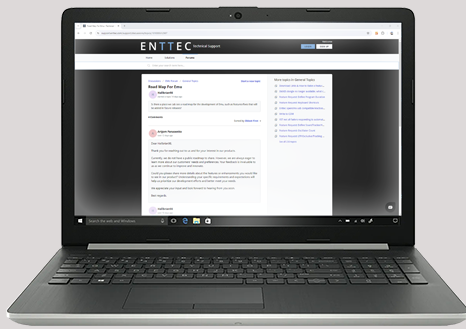

Welcome to another EMUletter keeping you up-to-date with ongoing tweaks and other tasty EMU-related morsels.

So, what have our software devs have been busy working on in the past couple of weeks?:

- **Added MIDI license limitation for Thomann Edition.**
- **Improved DIN Pixie support (standalone show recording, etc.).**
- **Improved license deactivation: changed message, fixed deactivation handling.**
- **Improved ENTTEC USB devices detection when the output enabled to the device.**
- **More soon - watch this space!**

If you have any questions, would like to contribute ideas or feedback to help shape

the future of EMU, or want to raise a fixture request for the [Crescit](#) library, don't be afraid to join in the action on our official EMU forum ...

What are our EMUicians up to?

The romantic Renaissance canals of Venice, Italy, are not exactly the first place one might normally associate with heavy metal music.

But you'd be surprised!

Local act [Obscura Qalma](#) formed in 2018 and have been bringing their blackened brand of heavily orchestrated death metal to eager audiences across Europe ever since.

The automated light show created using the EMU VST plugin within Steinberg's [Cubase](#) is one key ingredient in helping to make their current European tour a huge success.

Check out the drum cam for their track "**Hexed Katharsis**" to see how EMU can pierce the darkness with a sublime display of light.
